Door County Public Health Department News Release— Flooding #5: Returning Home after Flooding

Returning to Your Home after Flooding

Tips from the American Red Cross <http://rdcrss.org/1rJuFA6>

- If possible, leave children and pets with a relative or friend. If not, keep them away from hazards and floodwater.
- Beware of rodents, snakes, insects and other animals that may be on your property or in your home.
- Before entering your home, look outside for damaged power lines, gas lines, foundation cracks and other exterior damage. It may be too dangerous to enter the home.
- Smell for gas. If you smell natural gas or propane, or hear a hissing noise, leave immediately and contact the fire department.
- If your home was flooded, assume it is contaminated with mold. Mold increases health risks for those with asthma, allergies or other breathing conditions.
- Open doors and windows. Let the house air out before staying inside for any length of time if the house was closed for more than 48 hours.
- Turn the main electrical power and water systems off until you or a professional can ensure that they are safe. NEVER turn the power on or off, or use an electrical tool or appliance while standing in water.
- Check the ceiling and floor for signs of sagging. Water may be trapped in the ceiling or floors may be unsafe to walk on.

Using Generators Safely

- When using a portable generator, connect the equipment you want to power directly to the outlets on the generator. Do not connect a portable generator to a home's electrical system.
- If you are considering getting a generator, get advice from a professional, such as an electrician. Make sure that the generator you purchase is rated for the power that you think you will need.

Caution: Carbon Monoxide Kills

- Never use a generator, grill, camp stove or other gasoline, propane, natural gas or charcoal-burning devices inside a home, garage, basement, crawlspace, or any partially enclosed area. Locate unit away from doors, windows and vents that could allow carbon monoxide to come indoors.
- The primary hazards to avoid when using alternate sources for electricity, heating or cooking are carbon monoxide (CO) poisoning, electric shock and fire.
